

Health Safety and Environmental

HSE MANAGEMENT SOFTWARE FOR THE WAY YOU WORK

CORE Health, Safety and Environmental Management System

Our CORE application is used to bring together large amounts of data from various disciplines within your organization. In doing so, your organization can look at that data over longer periods of time to see any trends and act upon them. Having an effective means to capture and document accurate, reliable data within your Health and Safety program is one of the main components within any organization in order to manage risk.

A complete and integrated set of auditing tools ensures complete tracking of historical records for any transactions.

Managing Risk

Effective risk management requires an understanding of the issues related to risk, loss or other incidents that can negatively affect your business. By first understanding, capturing and analyzing these elements, companies can effectively minimize risk by creating and tracking action plans.

This type of analysis can only be accomplished with a software solution that can integrate all aspects of your risk management program into one location.

Core's integrated solution gathers all of that data in one solution and allows your organization to easily run trend analytics. You can easily track where incidents occur and why. You can determine company wide, where money is being spent and lost. You can determine where and why resources are being injured.

In addition to managing these risks CORE's HSE module tracks your regulatory requirement compliance as well as helps you track and manage your action plans.

CENDEC's CORE HSE Module

The CORE HSE Module leads the industry by tracking:

- Skills and certification requirements for resources
- HSE one-time and repetitive inspection compliance
- Automated notifications of incidents reported
- Incident types and priorities
- Type of events (findings and observations)
- Resources involved
- Client configurable data elements
- Immediate / direct causes
- Basic / underlying causes by both personal and system / job factors
- Corrective, preventative and continual improvement requirements
- Risk Analysis
- Action items and follow-up requirements / responsibilities
- User defined reporting
- Incident costs from beginning to completion and on-going follow-up
- Observations (PACE cards)
- HSE work packages and procedures

CENDEC strives to design systems that are intuitively arranged from the users' perspective and compatible with their work requirements. Our systems combine accuracy, consistency and superior functionality with flexibility and ease of use.

Let us show you how CORE's HSE Module can help you effectively manage one of the most important aspects of your business by helping to manage risk, track your compliance and help you effect a positive change within your organization

CENDEC's products are multi-company, multi-language, multi-currency and have been integrated with many other applications including Financial, Accounts Payable, HR, SCADA and GIS systems. Call us to see how CENDEC's real-world practicality can make your operational processes easier and cost-effective.
